

10,000 raingardens program

Learn how to divert water from hard surfaces such as driveways, pathways and roofs to irrigate your own specially designed raingarden.

Hear more about different types of raingardens and help us create a garden that slows the rate of water flowing into our rivers and creeks whilst removing pollutants. Leave feeling confident about adding this attractive and sustainable feature to your own garden.

Please wear sturdy shoes and weather appropriate clothing. Delicious refreshments will be provided.

Free workshop! Places limited.
Bookings essential
